

Edit controllers/PostController.php and add this to the function *actionIndex*:

```
if(isset($_GET['search']))
    $criteria->addSearchCondition('title',$_GET['search'], true, 'AND');
    $criteria->addSearchCondition('content',$_GET['search'], true, 'OR');
```

Create components/Search.php with the following content:

```
<?php
Yii::import('zii.widgets.CPortlet');

class Search extends CPortlet
{
    public $title='Search';

    protected function renderContent()
    {
        echo CHtml::form(Yii::app()->createUrl('post/index'), 'get');
        echo CHtml::textField('search', $_GET['search'],
            array('placeholder'=>'keyword...', 'size'=>20));
        echo CHtml::submitButton('OK');
        echo CHtml::endForm();
    }
}
```

Now add this line to views/layouts/column2.php and you are all set!

```
<?php $this->widget('Search'); ?>
```
